## 1. Introduction

The Quarterly Labour Force Survey (QLFS) is a household-based sample survey conducted by Statistics South Africa (Stats SA). It collects data on the labour market activities of individuals aged 15 years and older who live in South Africa. However, this report only covers labour market activities of persons aged 15–64 years.

Stats SA suspended face-to-face data collection for all its surveys on 19 March 2020 as a result of the COVID-19 pandemic and restricted movement. This was to ensure that the field staff and respondents were not exposed to the risk of contracting the coronavirus and to contain its spread. It is, however, imperative that Stats SA continues to provide statistics on the South African labour market. In this regard, Stats SA changed the mode of collection for collecting QLFS data to Computer-assisted Telephone Interviewing (CATI) for the QLFS data collection for Q2: 2020 to Q4: 2021. Over this period, the use of Computer-assisted Telephone Interviewing (CATI) saw the response rates of the survey decline over time to levels of concern to the organisation, reaching 44,6% in the 4th quarter of 2021. With the further easing of the lockdown restrictions in 2022, the organisation took a decision to revert to face-to-face data collection using Computer-assisted Personal Interviewing (CAPI). In that regard for Q1: 2022, Q2: 2022 and Q3: 2022, data collections were mainly conducted using face-to-face interviewing with CAPI and it was observed that there was improvement in the response rate for Q1: 2022, Q2: 2022 and Q3: 2022.

This report presents the key findings of the QLFS conducted from July to September 2022 (Q3: 2022).

## 2. Highlights of the results

**Table A: Key labour market indicators**

Labour force participation rate	55,2	58,6	58,3	-0,3	3,1		

*Due to rounding, numbers do not necessarily add up to totals.*

The working-age population increased by 144 000 or 0,4% in the third quarter of 2022 compared to the second quarter of 2022. Compared to Q3: 2021, the working-age population increased by 577 000 or 1,5%. The number of employed persons increased by 204 000 to 15,8 million in Q3: 2022, while the number of unemployed persons decreased by 269 000 to 7,7 million compared to Q2: 2022, resulting in a decrease of 66 000 (down by 0,3%) in the number of people in the labour force. The number of discouraged work-seekers decreased by 54 000 (down by 1,5%) while the number of people who were not economically active for reasons other than discouragement increased by 264 000 (up by 2,0%) between the two quarters, resulting in a net increase of 210 000 in the not economically active population.

To better understand the observed large changes in the key labour market indicators between Q2: 2022 and Q3: 2022, special tabulations were done to study movements between labour market statuses. It was observed that a large number of persons moved from the "unemployed" category to the "employed" and "not economically active" statuses between the two quarters, which resulted in a decrease of 1,0 percentage point in the unemployment rate to 32,9%. The labour force participation rate in Q3: 2022 was lower than that reported in Q2: 2022 as a result of these movements – decreasing by 0,3 of a percentage point to 58,3%. The absorption rate increased by 0,4 of a percentage point to 39,1% in the third quarter of 2022 compared to the second quarter of 2022.

Employment gains were observed in the formal sector (up by 235 000) and the informal sector (up by 6 000), while losses were observed in Private households (down by 36 000) and Agricultural sector (down by 1 000) in Q3: 2022.

Compared to a year ago, total employment increased by 1,5 million persons (or 10,4%). The number of unemployed persons increased by 82 000 (or 1,1%), while the number of persons who were not economically active decreased by 988 000 (or 5,5%).

### 3. Employment

**Figure 1: Quarter-to-quarter changes in employment, Q3: 2016 to Q3: 2022**

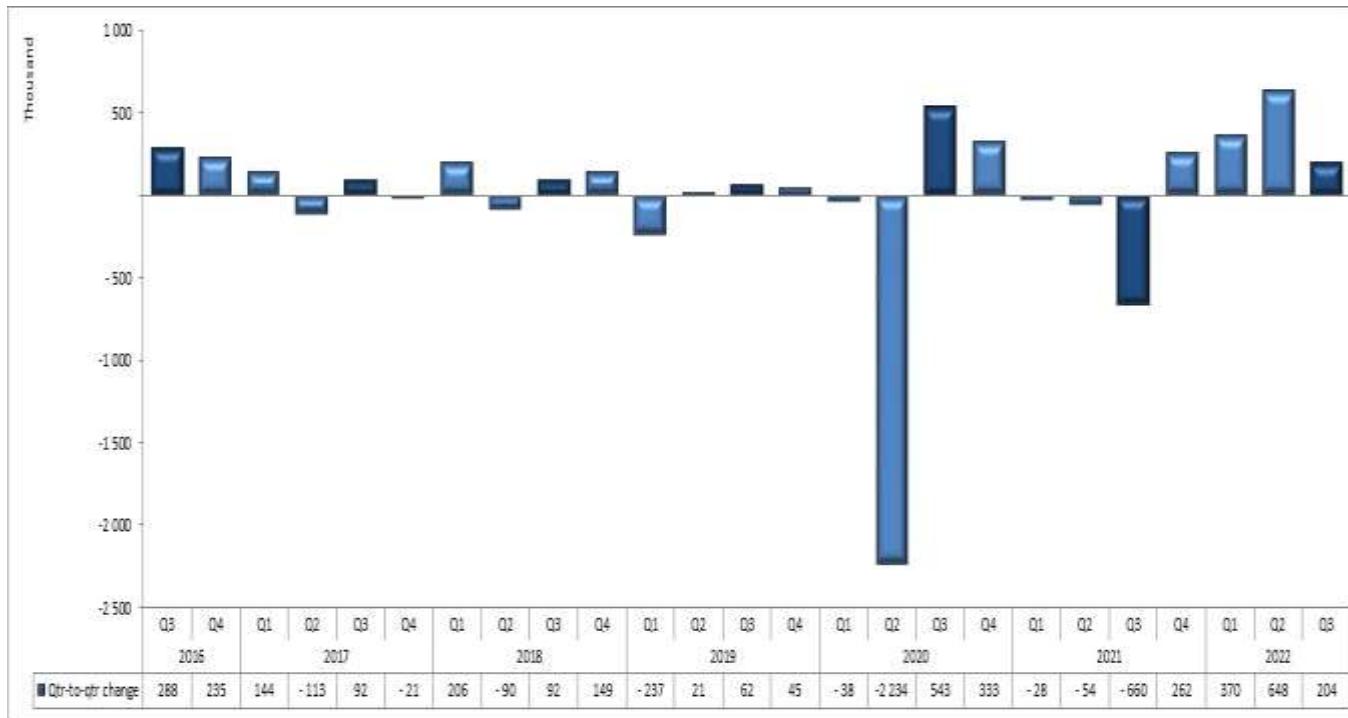

Figure 1 shows that employment increased by 204 000 in the third quarter of 2022 following an increase of 648 000 in the second quarter of 2022. As depicted in Figure 1, employment has mostly increased in the third quarters of each year since 2016, except for the decrease observed in 2021. The results further confirm that this was the fourth consecutive increase in employment since Q4: 2021.

**Table B: Employment by industry**

Industry	Jul-Sep 2021	Apr-Jun 2022	Jul-Sep 2022	Qtr-to- qtr change	Year-on- year change	Qtr-to- qtr change	Year-on- year change
	Thousands					Per cent	
	14 282	15 562	15 765	204	1 483	1,3	10,4
Total*							
Agriculture	829	874	873	-1	43	-0,1	5,2
Mining	345	407	407	-1	62	-0,2	18,0
Manufacturing	1 402	1 507	1 630	123	229	8,2	16,3
Utilities	96	104	116	13	21	12,2	21,9
Construction	1 157	1 177	1 223	46	66	3,9	5,7
Trade	2 778	3 163	3 245	82	468	2,6	16,8
Transport	964	906	939	33	-25	3,6	-2,6
Finance	2 386	2 460	2 380	-80	-6	-3,2	-0,2
Community and social services	3 191	3 821	3 849	27	658	0,7	20,6
Private households	1 130	1 124	1 088	-36	-42	-3,2	-3,7

\*Note: Total includes 'Other' industries.

Due to rounding, numbers do not necessarily add up to totals.

Note: Utilities refers to Electricity, gas and water supply.

Trade refers to Wholesale and retail trade; repair of motor vehicles, motorcycles and personal and household goods; hotels and restaurants.

Finance refers to Financial intermediation, insurance, real estate and business services.

Table B shows that between Q2: 2022 and Q3: 2022, the number of employed persons increased in six of the ten industries. The largest increase in employment was recorded in Manufacturing (123 000), followed by Trade (82 000), Construction (46 000), Transport (33 000) and Community and social services (27 000). Decreases in employment were recorded in the Finance (80 000), Private households (36 000), Mining and Agriculture (1 000 each) industries.

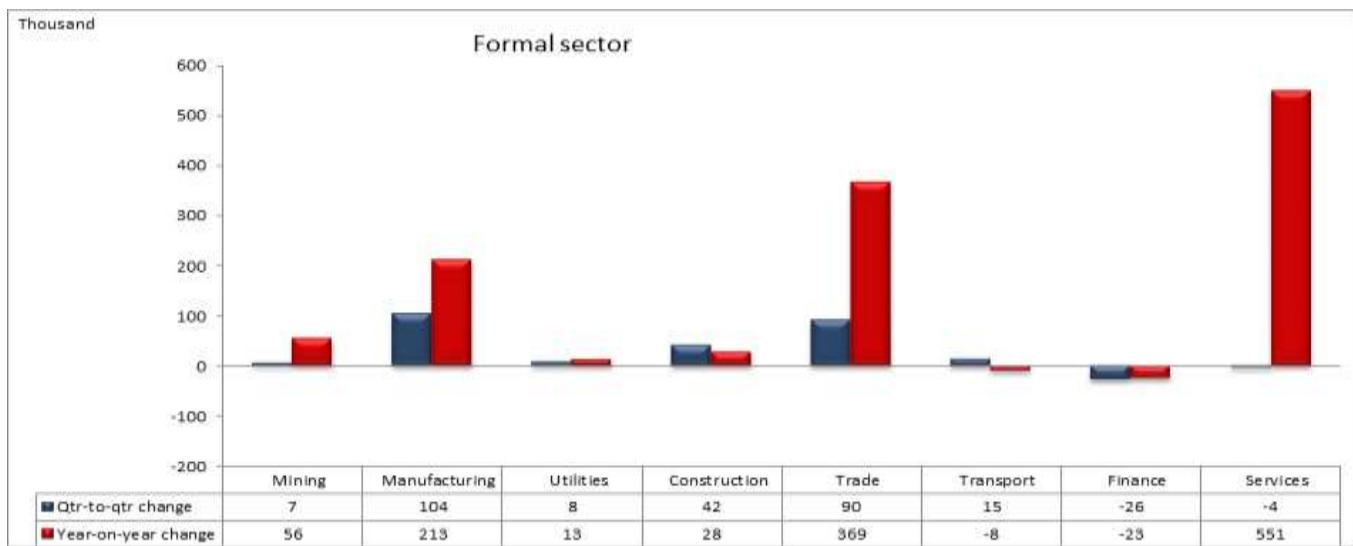

Compared to the same period last year, a net increase of 1,5 million in total employment in Q3: 2022 was largely due to increases in the number of people employed in the Community and social services (658 000), Trade (468 000) and Manufacturing (229 000) industries.

**Figure 2: Quarter-to-quarter employment changes in the formal and informal sectors, Q3: 2016 to Q3: 2022**

Following an increase in the informal sector employment in Q2: 2022 of 146 000, employment increased by 6 000 in Q3: 2022 in this sector. Employment in the formal sector increased by 235 000 in Q3: 2022 compared to Q2: 2022.

**Figure 3: Quarter-to-quarter and year-on-year changes in the formal sector by industry**

Note: Utilities refers to Electricity, gas and water supply.

Trade refers to Wholesale and retail trade; repair of motor vehicles, motorcycles and personal and household goods; hotels and restaurants.

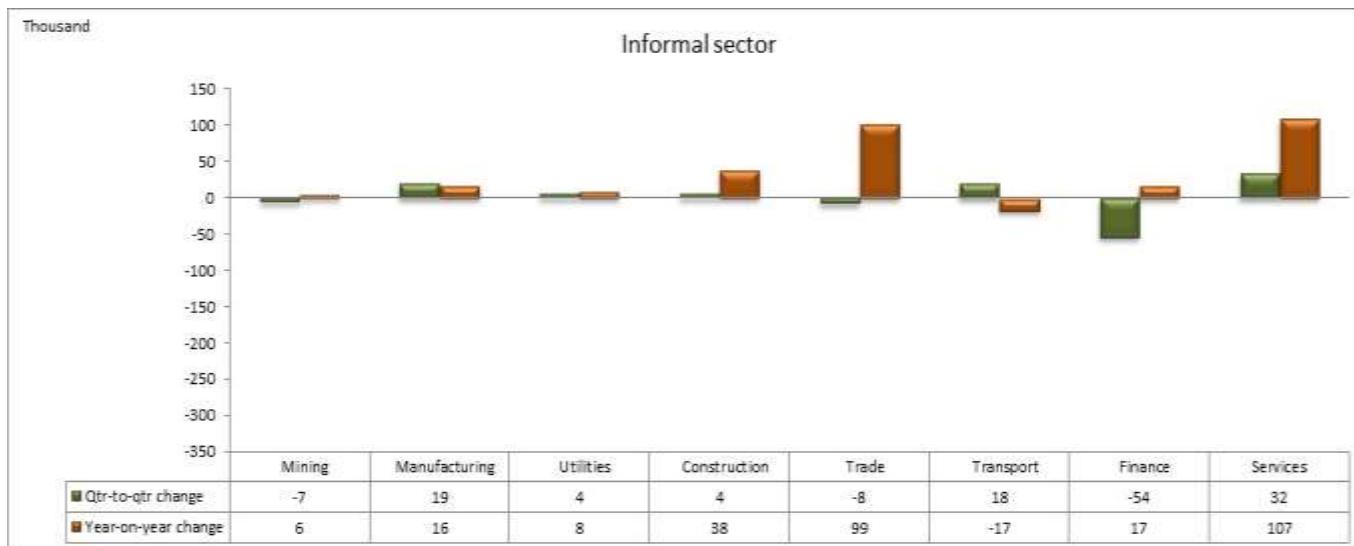

Finance refers to Financial intermediation, insurance, real estate and business services.

Services refers to Community, personal and social services.

The formal sector employment increased in six of the eight industries in Q3: 2022. The main contributors to the increase in the formal sector employment were Manufacturing (104 000), Trade (90 000), Construction (42 000) and Transport (15 000) industries. However, the decline in the formal sector employment was recorded in Finance (26 000) and Community and social services (4 000) in Q3: 2022 compared to Q2: 2022.

Compared to a year ago, a net gain of 1,2 million jobs in the formal sector employment was mainly driven by the Community and social services (551 000), Trade (369 000) and Manufacturing (213 000) industries in Q3: 2022. Finance (23 000) and Transport (8 000) industries recorded employment losses during the same period.

**Figure 4: Quarter-to-quarter and year-on-year changes in the informal sector by industry**

Note: Utilities refers to Electricity, gas and water supply.

Trade refers to Wholesale and retail trade; repair of motor vehicles, motorcycles and personal and household goods; hotels and restaurants.

Finance refers to Financial intermediation, insurance, real estate and business services.

Services refers to Community, personal and social services.

In the third quarter of 2022, informal sector employment increased by 6 000 persons compared to the previous quarter. The gains in the informal sector employment were driven by the Community and social services (32 000), Manufacturing (19 000) and Transport (18 000) industries.

Compared to Q3: 2021, the increases in employment in the informal sector were mainly driven by the Community and social services (107 000), Trade (99 000) and Construction (38 000) industries. Transport was the only industry that recorded losses in employment.

**Table C: Employment by occupation**

Occupation	Jul-Sep 2021	Apr-Jun 2022	Jul-Sep 2022	Qtr-to-qtr change	Year-on- year change	Qtr-to-qtr change	Year-on- year change
	Thousand					Per cent	
<b>Total</b>	<b>14 282</b>	<b>15 562</b>	<b>15 765</b>	<b>204</b>	<b>1 483</b>	<b>1,3</b>	<b>10,4</b>
Manager	1 342	1 253	1 479	226	137	18,1	10,2
Professional	946	1 166	1 049	-117	102	-10,1	10,8
Technician	1 235	1 369	1 540	171	304	12,5	24,6
Clerk	1 411	1 601	1 583	-17	173	-1,1	12,2
Sales and services	2 149	2 582	2 618	36	469	1,4	21,8
Skilled agriculture	63	72	75	3	11	3,7	17,9
Craft and related trade	1 526	1 673	1 664	-9	138	-0,6	9,0
Plant and machine operator	1 219	1 340	1 259	-81	40	-6,1	3,3
Elementary	3 534	3 648	3 673	24	139	0,7	3,9
Domestic worker	856	858	826	-32	-30	-3,7	-3,5

\*Note: Total includes 'Other' occupations.

Due to rounding, numbers do not necessarily add up to totals.

Five out of ten occupational categories experienced employment gains in Q3: 2022 compared to Q2: 2022. The largest increases in employment were observed in Managerial occupations (up by 226 000), followed by Technician

(up by 171 000), Sales and services (up by 36 000) and Elementary (up by 24 000) occupations. During the same period employment decreases were recorded in Professional occupations (down by 117 000), followed by Plant and machine operator (down by 81 000), Domestic worker (down by 32 000), Clerk (down by 17 000) and Craft and related trade (down by 9 000).

Year-on-year gains in employment were driven by Sales and services occupations (469 000), followed by Technician (304 000), Clerks (173 000) and Elementary (139 000) occupations. The only losses in employment were recorded among Domestic workers (30 000) occupation in Q3: 2022 compared to Q3: 2021.

**Table D: Employment by province**

Province	Jul-Sep 2021	Apr-Jun 2022	Jul-Sep 2022	Qtr-to-qtr change	Year-on- year change	Qtr-to-qtr change	Year-on- year change
	Thousand					Per cent	
<b>South Africa</b>	<b>14 282</b>	<b>15 562</b>	<b>15 765</b>	<b>204</b>	<b>1 483</b>	<b>1,3</b>	<b>10,4</b>
Western Cape	2 225	2 344	2 428	85	203	3,6	9,1
Eastern Cape	1 216	1 343	1 360	17	144	1,3	11,8
Northern Cape	275	318	324	6	49	1,8	17,6
Free State	720	807	798	-9	78	-1,2	10,8
KwaZulu-Natal	2 297	2 481	2 539	57	241	2,3	10,5
North West	851	924	858	-66	8	-7,1	0,9
Gauteng	4 448	4 787	4 923	136	475	2,8	10,7
Mpumalanga	1 104	1 167	1 199	32	92	2,7	8,6
Limpopo	1 145	1 391	1 337	-55	192	-3,9	16,7

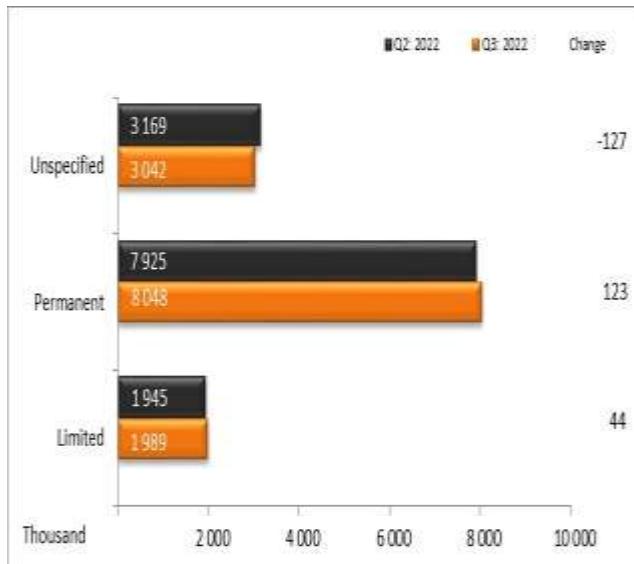

*Due to rounding, numbers do not necessarily add up to totals.*

Table D shows that the number of employed persons increased in six provinces between Q2: 2022 and Q3: 2022. The largest employment increases were recorded in Gauteng (up by 136 000), Western Cape (up by 85 000), KwaZulu-Natal (up by 57 000) and Mpumalanga (up by 32 000). Employment losses were recorded in North West (down by 66 000), Limpopo (down by 55 000) and Free State (down by 9 000) during the same period. North West recorded the biggest quarter-to-quarter change in employment with a decrease of 7,1%.

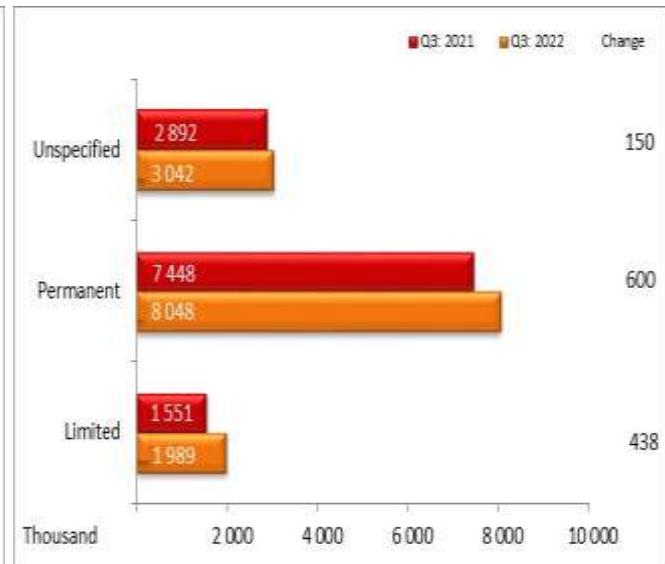

Compared to Q3: 2021, the largest increases in employment were recorded in Gauteng (up by 475 000), KwaZulu-Natal (up by 241 000), Western Cape (up by 203 000), Limpopo (up by 192 000) and Eastern Cape (up by 144 000). North West recorded the lowest increase in the number of employed persons at 8 000. Northern Cape had the biggest year-on-year change in employment with an increase of 17,6%, followed by Limpopo and Eastern Cape with increases of 16,7% and 11,8%, respectively.

### 3.1 Conditions of employment for employees

**Figure 5: Quarter-to-quarter changes in nature of employment contract**

**Figure 6: Year-on-year changes in nature of employment contract**

Figures 5 and 6 show that the majority of employees had permanent employment contracts. Between the second and the third quarters of 2022, the number of employees increased among those with contracts of a permanent nature (123 000) and contracts of a limited duration (44 000) while those with contracts of unspecified duration decreased by 127 000.

The year-on-year comparisons indicated that the number of employees increased for all contract types. The biggest increase was among those with contracts of a permanent nature (up by 600 000), followed by those with contracts of limited duration (up by 438 000) and unspecified duration (up by 150 000).

## 4. Unemployment and not in employment, education or training (NEET)

### 4.1 Unemployment

There are two definitions of unemployment used to describe form of unemployment: the official definition and the expanded definition of unemployment.

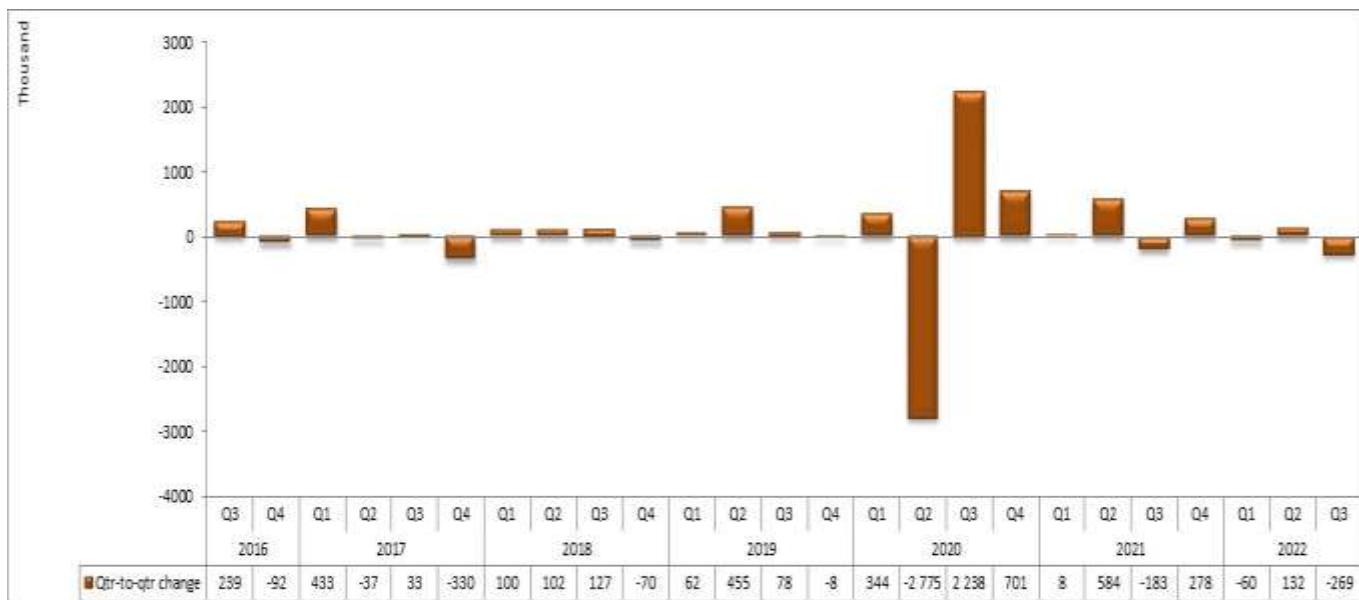

**Unemployed** persons according to the **Official definition** are those (aged 15–64 years) who:

- a) Were not employed in the reference week; **and**
- b) Actively looked for work or tried to start a business in the four weeks preceding the survey interview; **and**
- c) Were available for work, i.e. would have been able to start work or a business in the reference week; **or**
- d) Had not actively looked for work in the past four weeks, but had a job or business to start at a definite date in the future and were available.

**Unemployed** persons according to the **Expanded definition** are those (aged 15–64 years) who:

- a) Were not employed in the reference week; **and**
- b) Were available to work but did not look for work either because they are discouraged from looking for work (see definition of discouraged work-seeker) or did not look for work for other reasons other than discouragement.

**Figure 7: Quarter-to-quarter changes in unemployment, Q3: 2016 to Q3: 2022**

The number of unemployed persons decreased by 269 000 in Q3: 2022 following an increase of 132 000 in the previous quarter. Notable from Figure 7 is that this is the fourth decrease in unemployment since the COVID-19 national lockdown. However, it should be noted that from Q3: 2021 to Q1: 2022 the national lockdown regulations were relaxed, which allowed travelling, while during Q2: 2022 and Q3: 2022 the national state of disaster was terminated. This played a role in people actively looking for work, whereas during Q2: 2020 the country was under hard lockdown that prevented movement.

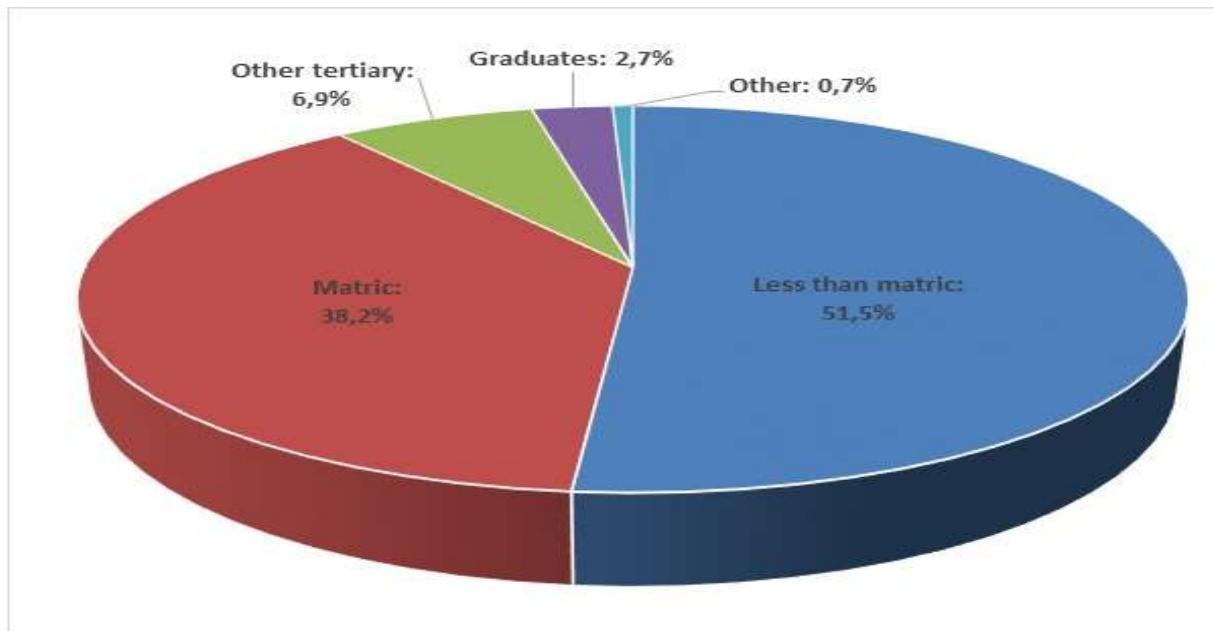

**Figure 8: Proportion of the unemployed by education level, Q3: 2022**

Figure 8 shows that of the 7,7 million unemployed persons in the third quarter of 2022, as many as 51,5% had education levels below matric, followed by those with matric at 38,2%. Only 2,7% of unemployed persons were graduates, while 6,9% had other tertiary qualifications as their highest level of education.

**Table E: Unemployment rate by province**

	Official unemployment rate					Expanded unemployment rate				
	Jul-Sep 2021	Apr-Jun 2022	Jul-Sep 2022	Qtr-to-qtr change	Year-on-year change	Jul-Sep 2021	Apr-Jun 2022	Jul-Sep 2022	Qtr-to-qtr change	Year-on-year change
	Per cent		Percentage points		Per cent		Percentage points			
South Africa	34,9	33,9	32,9	-1,0	-2,0	46,6	44,1	43,1	-1,0	-3,5
Western Cape	26,3	27,5	24,5	-3,0	-1,8	30,3	31,3	29,5	-1,8	-0,8
Eastern Cape	47,4	42,8	42,4	-0,4	-5,0	54,5	51,8	50,6	-1,2	-3,9
Northern Cape	24,9	23,7	26,4	2,7	1,5	49,1	46,3	45,9	-0,4	-3,2
Free State	38,1	32,4	33,8	1,4	-4,3	45,8	40,3	40,8	0,5	-5,0
KwaZulu-Natal	28,7	32,7	30,6	-2,1	1,9	48,6	49,4	46,4	-3,0	-2,2
North West	35,7	32,2	39,0	6,8	3,3	52,2	49,2	53,3	4,1	1,1
Gauteng	37,0	34,4	33,7	-0,7	-3,3	44,9	40,8	39,0	-1,8	-5,9
Mpumalanga	37,5	36,1	35,1	-1,0	-2,4	49,7	48,1	46,5	-1,6	-3,2
Limpopo	32,5	36,3	31,0	-5,3	-1,5	54,5	47,5	49,9	2,4	-4,6

The official unemployment rate decreased by 1,0 percentage point to 32,9% in Q3: 2022 compared to Q2: 2022. The official unemployment rate decreased in six provinces. The largest decreases were recorded in Limpopo (down by 5,3 percentage points), followed by Western Cape (down by 3,0 percentage points), KwaZulu-Natal (down by 2,1 percentage points) and Mpumalanga (down by 1,0 percentage point). North West recorded the largest increase of 6,8 percentage points in the official unemployment rate, followed by Northern Cape (up by 2,7 percentage points) and Free State (up by 1,4 percentage points).

Year-on-year, the official unemployment rate decreased by 2,0 percentage points. The official unemployment rate decreased in six provinces. The largest decrease in the unemployment rate was recorded in Eastern Cape (down by 4,8 percentage points), followed by Free State (down by 5,0 percentage points), North West (down by 3,5 percentage points) and Mpumalanga (down by 2,6 percentage points). The largest increases were recorded in KwaZulu-Natal (up by 7,8 percentage points), followed by Gauteng (up by 6,6 percentage points) and Limpopo (up by 4,6 percentage points).

5,0 percentage points), followed by Free State (down by 4,3 percentage points), Gauteng (down by 3,3 percentage points) and Mpumalanga (down by 2,4 percentage points). The largest increase in the unemployment rate was recorded in North West (up by 3,3 percentage points), KwaZulu-Natal (up by 1,9 percentage points) and Northern Cape (up by 1,5 percentage points).

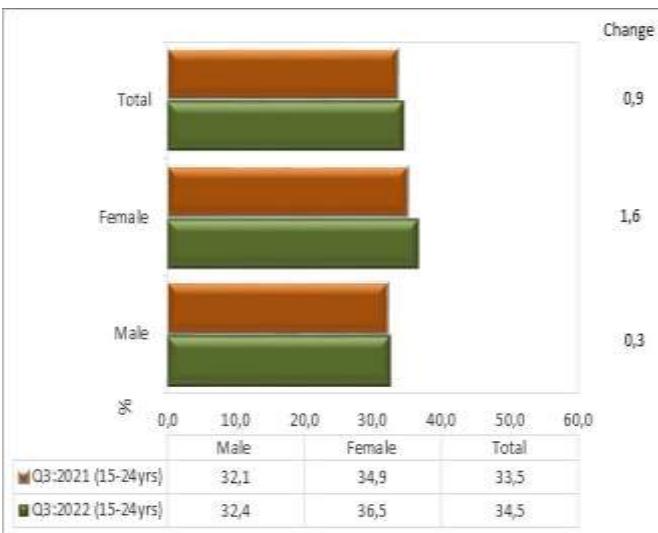

The expanded unemployment rate decreased by 1,0 percentage point in Q3: 2022 compared to Q2: 2022. This is reflective of the fact that people were available for work but did not actively look for work. All provinces recorded a decrease in the expanded unemployment rate, except in North West, Limpopo and Free State, where it increased by 4,1 percentage points, 2,4 percentage points and 0,5 of a percentage point, respectively. The largest decrease was recorded in KwaZulu-Natal (down by 3,0 percentage points), followed by Western Cape and Gauteng (down by 1,8 percentage points each) and Mpumalanga (down by 1,6 percentage points).

Compared to the same period last year, the expanded unemployment rate decreased by 3,5 percentage points in Q3: 2022. Eight out of the nine provinces recorded decreases in the expanded unemployment rate. The largest decrease in the expanded unemployment rate was recorded in Gauteng (down by 5,9 percentage points), followed by Free State (down by 5,0 percentage points) and Limpopo (down by 4,6 percentage points). The only increase in the expanded unemployment rate was recorded in North West (up by 1,1 percentage points).

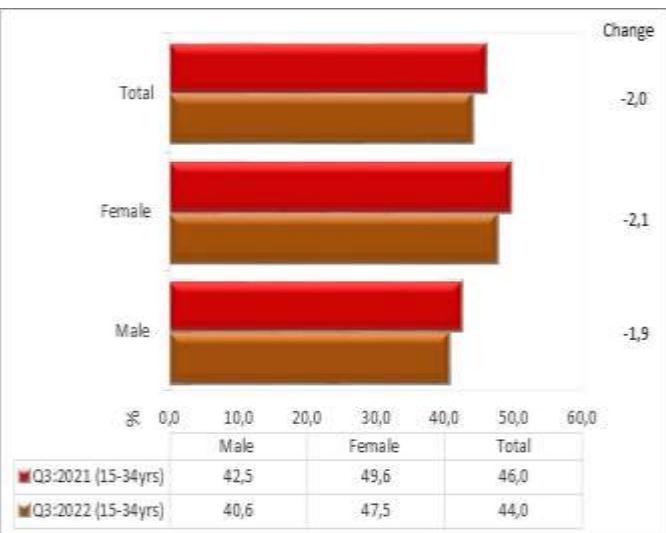

#### 4.2 Not in employment, education or training (NEET)

Some young people have been disengaged with the labour market and they are also not building on their skills base through education and training – they are not in employment, education or training (NEET). The NEET rate serves as an important additional labour market indicator for young people.

**Figure 9a: NEET rates for youth aged 15–24 years by sex**

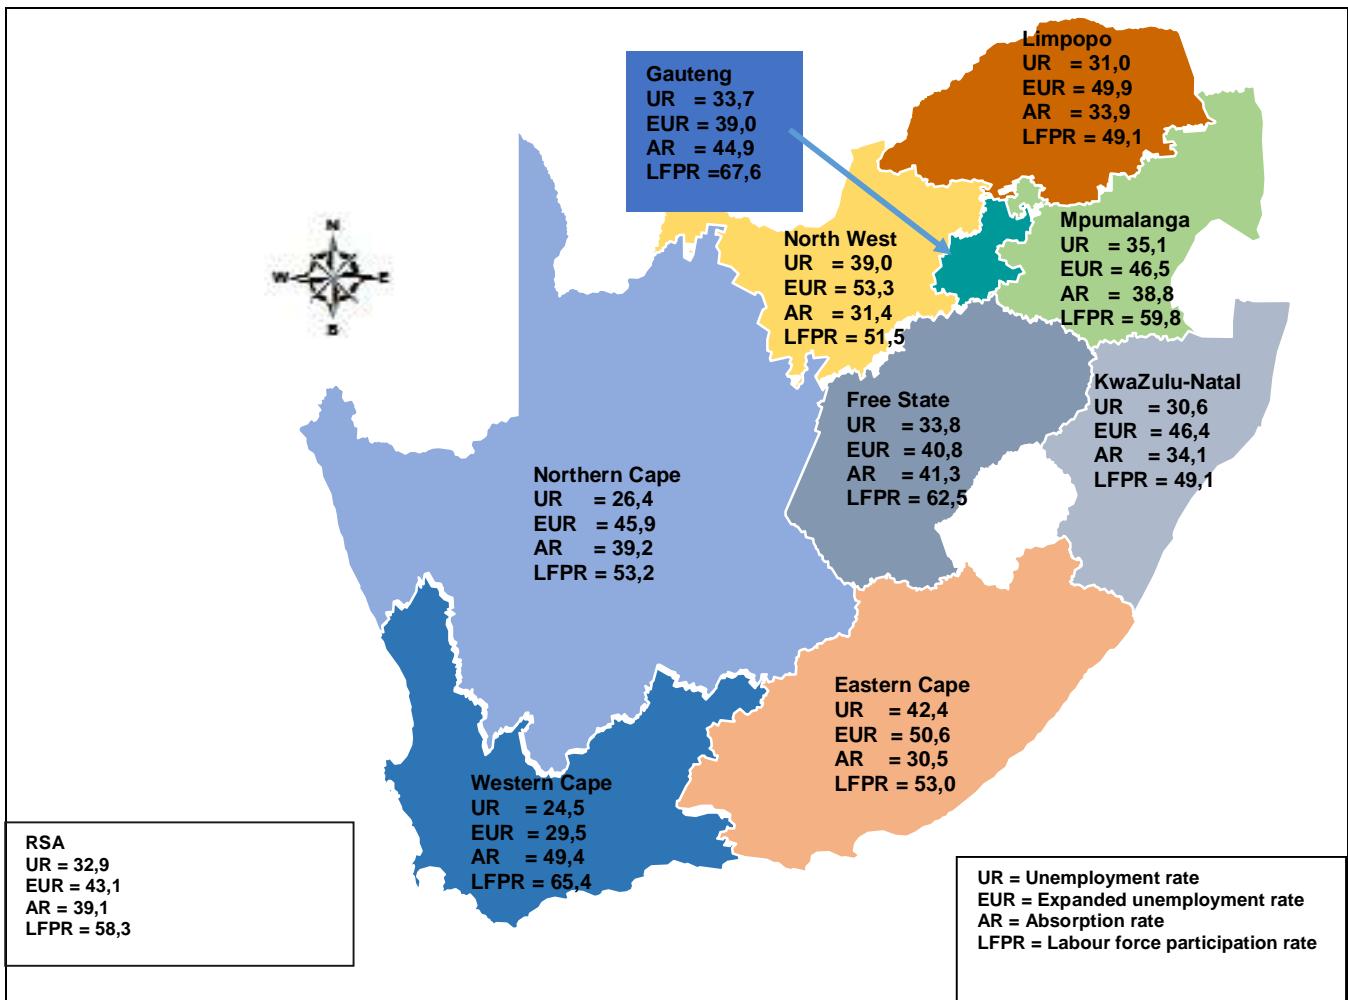

**Figure 9b: NEET rates for youth aged 15–34 years by sex**

There were about 10,2 million young people aged 15–24 years in Q3: 2022, of which 34,5% were not in employment, education or training (NEET). This is 0,9 of a percentage point higher than the NEET rate in Q3: 2021. In this age group, the NEET rate for males and females increased by 0,3 of a percentage point and 1,6 percentage points, respectively. The NEET rate for females was higher than that of their male counterparts in both years (Figure 9a).

Compared to Q3: 2021, the percentage of young persons aged 15–34 years who were not in employment, education or training (NEET) decreased by 2,0 percentage points from 46,0% to 44,0% in Q3: 2022. The NEET rate for males decreased by 1,9 percentage points, and for females the rate decreased by 2,1 percentage points. In both Q3: 2021 and Q3: 2022, more than four in every ten young males and females were not in employment, education or training (Figure 9b).

**Figure 14: Unemployment rate by education status, Q3: 2014 to Q3: 2022**

## 7. Comparison between the Quarterly Labour Force Survey (QLFS) and the Quarterly Employment Survey (QES)

Stats SA conducts two official sources of employment statistics surveys: the QES (which is establishment based) and the QLFS (which is household based). Each survey has its strengths and limitations. For example, the QES cannot provide information on the following:

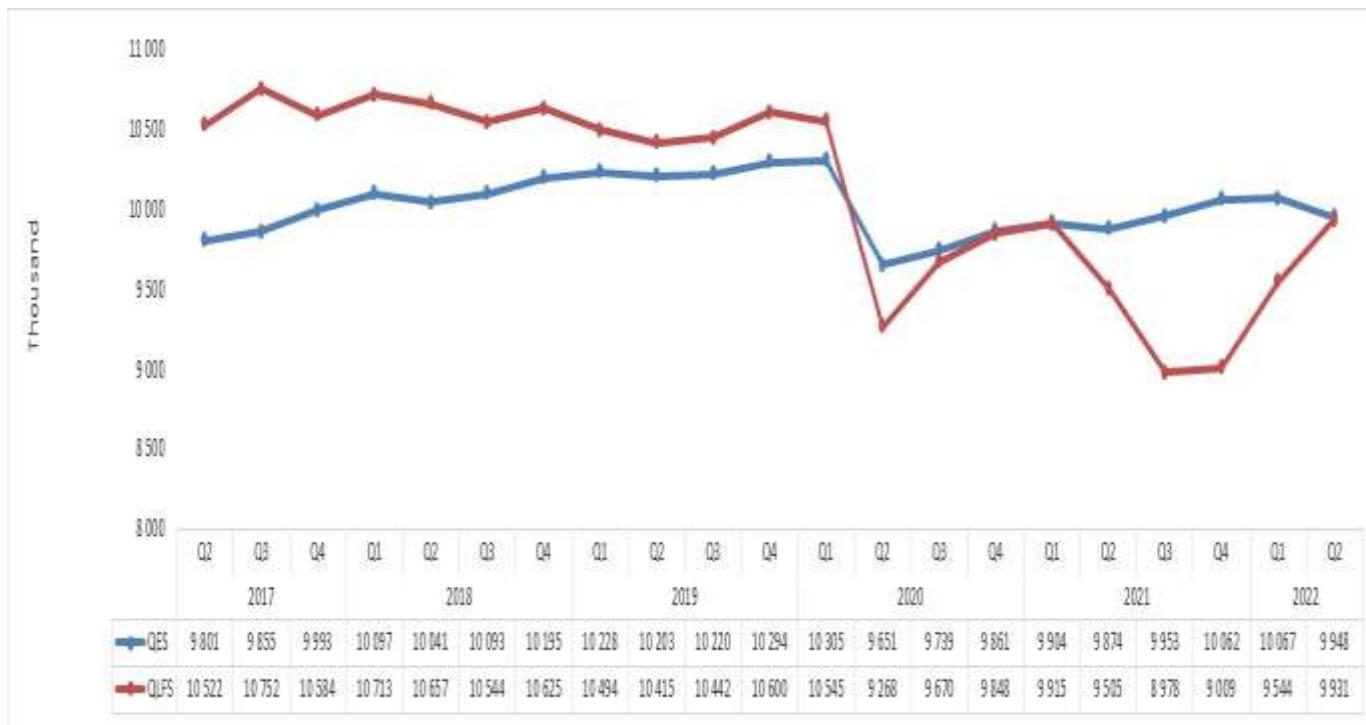

- Description of the employed, e.g. their demographic profile, education level, hours of work, etc.; and
- Unemployment and descriptors of the unemployed.

The QLFS is a survey of households that collects information from approximately 30 000 dwelling units and collects data on the labour market activities of individuals, whereas the QES is an enterprise-based survey that collects information from non-agricultural businesses and organisations from approximately 20 000 units. The numerous conceptual and methodological differences between the household- and enterprise-based surveys result in important distinctions in the employment estimates derived from the surveys. Among these are:

- The household-based survey includes agricultural workers, self-employed workers whose businesses are unincorporated, unpaid family workers, and private household workers among the employed; while these groups are excluded from the enterprise-based QES survey.
- The household-based survey is limited to workers 15 years of age and older, whereas the enterprise-based survey is not limited by age.
- The household-based survey has no duplication of individuals, because individuals are counted only once, even if they hold more than one job. In the enterprise-based survey, employees working at more than one job and thus appearing on more than one payroll are counted separately for each appearance.
- QLFS includes income tax, VAT and number of employees in determining the formal sector, while QES surveys enterprises with only VAT with annual turnover greater than R300 000.
- QLFS allows for proxy responses (a household member responding on behalf of the other). This can introduce misclassification of items, e.g. formal/informal classification.

**Table F: Key differences between the QLFS and the QES**

	<b>QLFS</b>	<b>QES</b>
<b>Coverage</b>	Private households and workers' hostels Non-institutional population (15 years and older) Total employment (including Informal sector, Private households, Agriculture and small businesses)	Payroll of VAT-registered businesses Employees only Formal sector, excluding Agriculture
<b>Sample size</b>	Quarterly sample of approximately 30 000 dwellings in which households reside	Quarterly sample of 20 000 non-agricultural formal- sector businesses
<b>Reference period</b>	One week prior to the interview	Payroll on the last day of the quarter
<b>Standard Industrial Classification (SIC)</b>	All industries	Excluding Agriculture and Private households
<b>Formal sector definition (excluding Agriculture and Private households)</b>	Employers and own-account workers registered for VAT or income tax Employees paying income tax and those not paying tax but working in firms with five or more workers	Employees on a payroll of VAT-registered businesses

**Figure 15: Formal sector employment trends in QLFS and QES, Q2: 2017 to Q2: 2022**

## 8. Technical notes

### 8.1 Response details

**Table G: Response rates by province and metropolitan area**

Province/metropolitan area	Jul-Sep 2022
<b>National</b>	<b>85,4</b>
<b>Western Cape</b>	<b>83,8</b>
Non-metro	85,5
City of Cape Town	82,9
<b>Eastern Cape</b>	<b>93,7</b>

City of Tshwane	78,9
<b>Mpumalanga</b>	<b>93,8</b>
<b>Limpopo</b>	<b>95,8</b>

### 8.2 Survey requirements and design

The Quarterly Labour Force Survey (QLFS) uses the Master Sample frame that has been developed as a general-purpose household survey frame that can be used by all other Stats SA household-based surveys having design requirements that are reasonably compatible with the QLFS. The 2013 Master Sample is based on information collected during the 2011 Census conducted by Stats SA. In preparation for Census 2011, the country was divided into 103 576 enumeration areas (EAs). The census EAs, together with the auxiliary information for the EAs, were used as the frame units or building blocks for the formation of primary sampling units (PSUs) for the Master Sample, since they covered the entire country and had other information that is crucial for stratification and creation of PSUs. There are 3 324 primary sampling units (PSUs) in the Master Sample, with an expected sample of approximately 33 000 dwelling units (DUs). The number of PSUs in the current Master Sample (3 324) reflects an 8,0% increase in the size of the Master Sample compared to the previous 2008 Master Sample (which had 3 080 PSUs). The larger Master Sample of PSUs was selected to improve the precision (smaller coefficients of variation, known as CVs) of the QLFS estimates.

The Master Sample is designed to be representative at the provincial level and within provinces at metro/non-metro levels. Within the metros, the sample is further distributed by geographical type. The three geography types used are Urban, Tribal and Farms. This implies, for example, that within a metropolitan area the sample is representative of the different geography types that may exist within that metro.

It is divided equally into four subgroups or panels called rotation groups. The rotation groups are designed in such a way that each of these groups has the same distribution pattern as that which is observed in the whole sample. They are numbered from one (1) to four (4), and these numbers also correspond to the quarters of the year in which the sample will be rotated for the particular group.

The sample for the QLFS is based on a stratified two-stage design with probability proportional to size (PPS) sampling of PSUs in the first stage, and sampling of dwelling units (DUs) with systematic sampling in the second stage.

### **8.3 Sample rotation**

For each quarter of the QLFS, a quarter of the sampled dwellings are rotated out of the sample. These dwellings are replaced by new dwellings from the same PSU or the next PSU on the list. Thus, sampled dwellings are expected to remain in the sample for four consecutive quarters. It should be noted that the sampling unit is the dwelling, and the unit of observation is the household. Therefore, if a household moves out of a dwelling after being in the sample for two quarters (for example) and a new household moves in, the new household will be enumerated for the next two quarters. If no household moves into the sampled dwelling, the dwelling will be classified as vacant (or unoccupied).

### **8.4 Weighting**

The sample weights were constructed in order to account for the following: the original selection probabilities (design weights); adjustments for PSUs that were sub-sampled or segmented; excluded population from the sampling frame (EAs with insufficient DUs); non-response; weight trimming; benchmarking to known population estimates from the Demographic Analysis Chief Directorate within Stats SA; and raking to bias-adjusted control estimates from a bias-adjustment procedure to compensate for the non-coverage bias in the sample due to only observing those households that can be contacted by telephone.

#### **8.4.1 Non-response adjustment**

In general, imputation is used for item non-response (i.e. blanks within the questionnaire) and edit failures (i.e. invalid or inconsistent responses). The eligible households in the sampled dwellings can be divided into two response categories: respondents and non-respondents. Weight adjustment is applied to account for the non-respondent households (e.g. refusal, no contact, etc.). The adjustment for total non-response was computed at two levels of non-response: PSU non-response and household non-response.

#### **8.4.2 Calibrated survey weights**

The calibrated sample weights are constructed such that all individuals within a household are assigned the same adjusted base weight. The adjusted base weights are calibrated such that the aggregate totals will match with independently derived population estimates (from the Stats SA Demographic Analysis Chief Directorate) for various age, race and gender groups at national level and individual metropolitan and non-metropolitan area levels within the provinces. The calibrated weights are constructed using the constraint that each person within the same household should have the same calibrated weight, with a lower bound on the calibrated weights set at 50.

### **8.4.3 Final survey weights**

In the final step of constructing the sample weights, the calibrated sample weights were raked by applying the raking procedure twice with different sets of control totals at each stage of raking.

In the first application of the raking procedure, the following 4 control totals were used to compute the intermediate raked weights:

- Employment by Industry (13 cells)
- Employment by Occupation (13 cells)
- Sector (7 cells)
- Employment Status by Population Group (12 cells)

The intermediate raked weights computed above were further raked with the following 3 control totals to compute the final survey weights:

- Age by Gender (26 cells)
- Age by Population Group (52 cells)
- Age by Metro/Non-metro (51 cells)

The first application of the raking procedure uses employment status as control totals in various combinations with other variables. The second application of the raking procedure involves various combinations of population categories by age with gender, population group and metro/non-metro breakdown within the provinces. The advantage of applying the raking procedure twice would be that the population aged 15 and older would be consistent with the known population totals from Demographic Analysis. Moreover, the second application of raking would introduce variability in the estimates of employment/unemployment while correcting for the bias due to non-coverage of the non-telephone households.

## 8.5 Estimation

The final survey weights are used to obtain the estimates for various domains of interest, e.g. number of persons employed in Agriculture in Western Cape, the number of females employed in Manufacturing, etc.

## 8.6 Reliability of the survey estimates

Since estimates are based on sample data, they differ from figures that would have been obtained from complete enumeration of the population using the same instrument. Results are subject to both sampling and non-sampling errors. Non-sampling errors include biases from inaccurate reporting, processing, and tabulation, etc., as well as errors from non-responses and incomplete reporting. These types of errors cannot be measured readily. However, to some extent, non-sampling errors can be minimised through the procedures used for data collection, editing, quality control, and non-response adjustment. The variances of the survey estimates are used to measure sampling errors.

### (i) Variance estimation

The most commonly used methods for estimating variances of survey estimates from complex surveys such as the QLFS are the Taylor-series Linearization, Jack-knife Replication, Balanced Repeated Replication (BRR), and Bootstrap methods (Wolter, 2007).<sup>1</sup> The Fay's BRR method has been used for variance estimation in the QLFS because of its simplicity.

### (ii) Coefficient of variation

It is more useful in many situations to assess the size of the standard error relative to the magnitude of the characteristic being measured (the standard error is defined as the square root of the variance). The **coefficient of variation (cv)** provides such a measure. It is the **ratio of the standard error of the survey estimate to the value of the estimate itself expressed as a percentage**. It is very useful in comparing the precision of several different survey estimates, where their sizes or scales differ from one another.

### (iii) P-value of an estimate of change

The p-value corresponding to an estimate of change is the probability of observing a value larger than the particular observed value under the hypothesis that there is no real change. If the p-value <0,01, the difference is highly significant; if p-value is between 0,01 and 0,05, the difference is significant; and if p-value >0,05, the difference is not significant.

## 9. Definitions

**Discouraged work-seeker** is a person who was not employed during the reference period, wanted to work, was available to work/start a business but did not take active steps to find work during the last four weeks, provided that the main reason given for not seeking work was any of the following: no jobs available in the area; unable to find work requiring his/her skills; lost hope of finding any kind of work.

**Economic activities** are those activities that contribute to the production of goods and services in the country. There are two types of economic activities, namely: (1) Market production activities (work done for others and usually associated with pay or profit); and (2) Non-market production activities (work done for the benefit of the household, e.g. subsistence farming).

**Employed** persons are those aged 15–64 years who, during the reference week, did any work for at least one hour, or had a job or business but were not at work (i.e. were temporarily absent).

**Employment-to-population ratio (labour absorption rate)** is the proportion of the working-age population that is employed.

---

<sup>1</sup>Wolter, K.M. 2007. *Introduction to Variance Estimation, 2<sup>nd</sup> Edition*. New York: Springer-Verlag.

**Informal employment** identifies persons who are in precarious employment situations, irrespective of whether or not the entity for which they work is in the formal or informal sector. Persons in informal employment, therefore, comprise all persons in the informal sector, employees in the formal sector, and persons working in private households who are not entitled to or receive basic benefits such as pension or medical aid contributions from their employer, and who do not have a written contract of employment.

**Informal sector:** The informal sector has the following two components:

- i) Employees working in establishments that employ fewer than five employees, who do not deduct income tax from their salaries/wages; and
- ii) Employers, own-account workers and persons helping unpaid in their household business who are not registered for either income tax or value-added tax.

The **labour force** comprises all persons who are employed, plus all persons who are unemployed.

**Labour force participation rate** is the proportion of the working-age population that is either employed or unemployed.

**Long-term unemployment:** Persons in long-term unemployment are those individuals among the unemployed who were without work and trying to find a job or start a business for one year or more.

**Not economically active:** Persons aged 15–64 years who are neither employed nor unemployed in the reference week.

Persons in **underemployment (time-related)** are employed persons who were willing and available to work additional hours, whose total number of hours actually worked during the reference period were below 35 hours per week.

**Under-utilised labour** comprises three groups that are defined as follows: persons who are underemployed, persons who are unemployed, and persons who are discouraged.

**Unemployed** persons according to the **Official definition** are those (aged 15–64 years) who:

- a) Were not employed in the reference week; **and**
- b) Actively looked for work or tried to start a business in the four weeks preceding the survey interview; **and**
- c) Were available for work, i.e. would have been able to start work or a business in the reference week; **or**
- d) Had not actively looked for work in the past four weeks, but had a job or business to start at a definite date in the future and were available.

**Unemployed** persons according to the **Expanded definition** are those (aged 15–64 years) who:

- a) Fall under official unemployment (searched and available); **and**
- b) Were available to work but are/or:
  - Discouraged work-seekers
  - Have other reasons for not searching

**Unemployment rate** is the proportion of the labour force that is unemployed.

The **working-age population** comprises all persons aged 15–64 years.
